

Figure 3.1: Installation Diagram

Daughterboard position:

Slot	INT-IPA	INT-IPB
1	Yes	Yes
2	Only if slot 1 is busy	No
3	Only if slots 1 and 2 are busy	No

3.2 Ethernet Network Connection

3.2.1 INT-IP3 Board in Coupler Mode

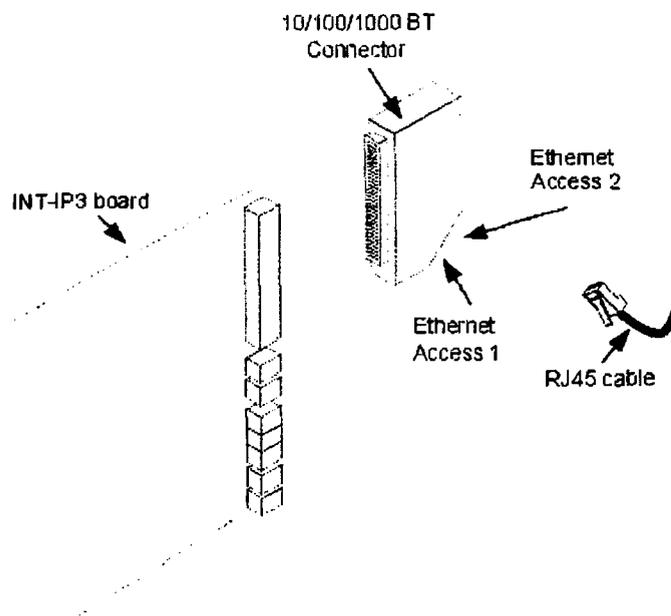

Figure 3.2: Connection Diagram for the INT-IP3 Board

Only one Ethernet access (1 or 2) can be used at the same time.

The 10/100/1000 Base-T connector (ref: 3BA23278AA) ensures the connection to the Ethernet network through an RJ45 cable.

Note:

The 10/100/1000 Base-T connector (ref: 3BA23278AA) is not compatible with the former generation of INT-IP and INT-IP2 boards.

3.2.2 INT-IP3 Board in CPU Mode

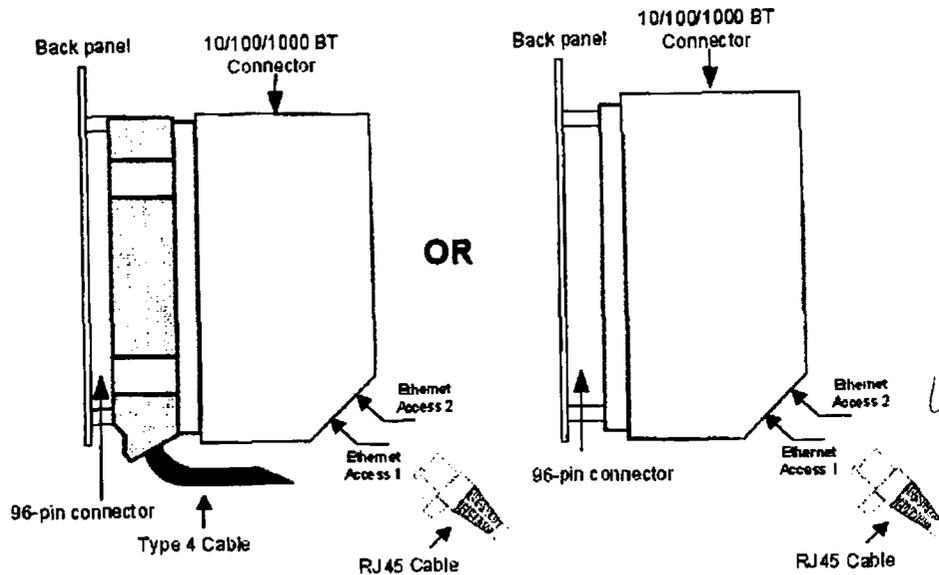

Figure 3.3: Connection Diagram for the INT-IP3 Board in CPU Mode

Only one Ethernet access (1 or 2) can be used at the same time.

The 10/100/1000 Base-T connector (ref: 3BA23278AA) ensures the connection to the Ethernet network through an RJ45 cable.

A type 4 cable (optional) is used to connect alarm and trunk diversion. For more information, see: TY4 cable - Hardware description.

3.3 Connecting a Console for Static Configuration

For static configuration of the INT-IP3 board, a VT100 console (or emulation) must be connected as follows:

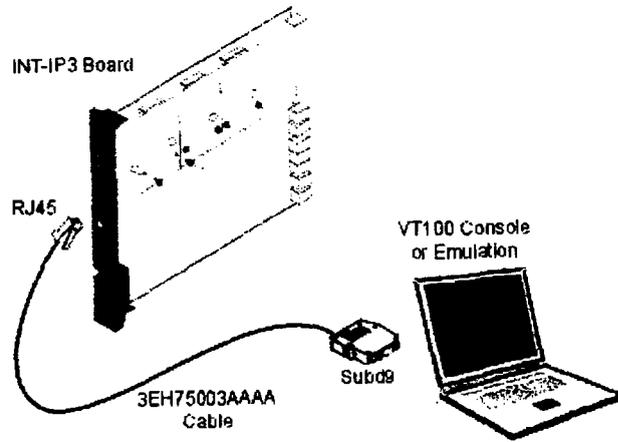

Figure 3.4: Connection for Static Configuration

U.A. 233110

The console must be configured as follows:

- Baud rate: 9600bps
- Data bits: 8
- Parity: None
- Stop bits: 1
- Flow control: XON/XOFF

Front Panel V24 Connector Output Pins (RJ45):

Pin	Signal	Description
1		Data reception
2		
3	RD	
4	GND	Data transmission
5	GND	
6	TD	Transmission Request
7		
8	RTS	

Caution:

The V24/RJ45 cable (3EH75003AA) used for INT-IP3 static configuration is not compatible with first generation INT-IP boards.

This cable can also be used for static configuration of:

- INT-IP2 board

U.A. 233110

U.A. 233110

- Common hardware boards

3.4 PSAL Connection

In CPU mode, the INT-IP3 board is installed in a remote ACT. The PSAL wire must be connected to this remote ACT for the INT-IP3 board to start.

For more information on PSAL connection, see the cabinet documentation.

1 Hardware description

1.1 Racks Description

The OmniPCX Enterprise uses the same racks as the OmniPCX Office.

There are four rack models in 19" format (two 1U type racks and two 3U type racks), all designed to be mounted in a computer cabinet or placed on a shelf. The rack footprint is identical, allowing easy stacking of racks.

The only functional difference between 1U and 3U type racks is the number of boards they can contain.

The difference between the two types of 1U rack and the two types of 3U racks is the presence of internal batteries.

One of the 1U racks and one of the 3U racks have internal batteries. As of Release R5.1.2, the other 1U and 3U rack have external batteries.

As of R5.1.2, all types of racks can coexist.

An Common Hardware Media Gateway comprises a main rack and one or two extension racks if necessary.

1.1.1 S (SMALL) Rack

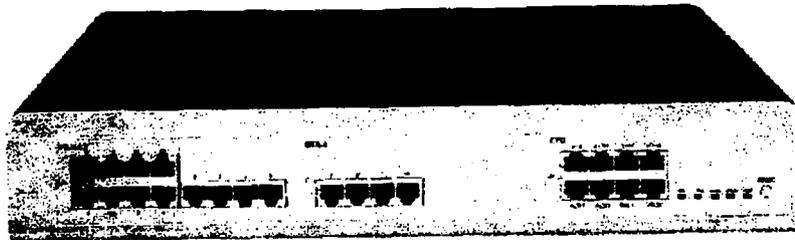

Figure 1.1: Small Rack Front Panel

- 28 ports maximum
- One controller slot + two all-purpose slots
- Dimensions: H = 66 mm (2.6")/ W=442 mm (17")/ D = 400 mm (15.7")
- Weight: 6 kg (13.2 lb)

1.1.2 L (LARGE) Rack

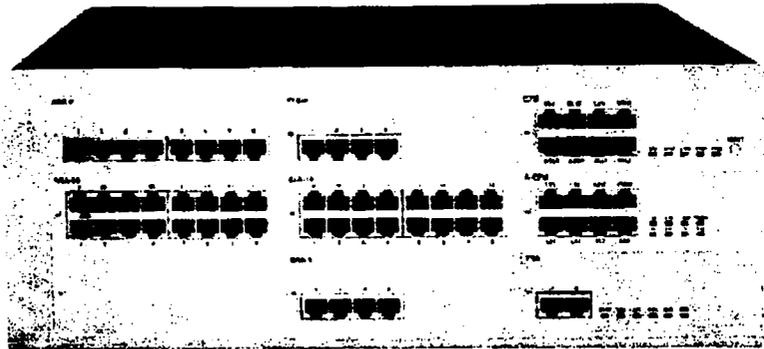

Figure 1.2: Large Rack Front Panel

- 96 ports maximum
- One controller slot + one all-purpose slot + seven specific slots
- Dimensions: H = 154 mm (6")/ W=442 mm (17")/ D = 400 mm (15.7")
- Weight: 13 kg (28.6 lb)

UAI, 283/16

BOARDS	FUNCTIONS	DAUGHTERBOARDS	CONNECTION
PRA-T1 (CCS mode) T1 CAS (CAS mode) PRA-T2 PRA DASS2 PCM R2	PRA-T1 and T1 CAS: 23 B channels + one D channel PRA-T2: T2 public network access PRA DASS2: DASS2 public network access PCM R2: 30 B channels (64 Kbits/s) + one signaling channel (4 Kbits/s); 2048 Kbits/s		PRA-T1 and T1 CAS: Public network PRA-T2: ISDN network, ABC or QSIG network PRA DASS2: DASS2 ISDN network PCM R2: public network
APA4 APA8	Four or eight analog Trunk Line (TL) devices	METCLI: charge unit receiver (optional) GSCLI: "ground start" board enables "ground start signaling", mainly used in the USA (optional) CLIDSP: enables CLIP (Calling Line Identification Protocol) (optional) As from R5.1.2 the CLIP feature is available for the USA	Analog Trunk Line (TL) and TL-SUBS diversion
MIX2/4/4 MIX4/8/4 MIX4/4/8 MIX0/4/4 MIX0/8/4 MIX0/4/8	Zero, two or four T0 base accesses + four or eight UA devices + four or eight Z devices		ISDN network, Z analog terminals and Alcatel Reflexes sets
LANX16 / LANX16-1	16 Ethernet 10/100 BT ports		IP phones, Lanswitch, Hub, etc.
LANX8-2	7 10/100BaseT ports and one 10/100/1000BaseT port		IP phones, Lanswitch, Hub, etc.
LANX16-2	14 10/100BaseT ports and two 10/100/1000BaseT ports		IP phones, Lanswitch, Hub, etc.
RMA	Remote maintenance		See the RMA documents
MODB	Modem support	Modem	See the RMA documents

Note 1:

As of R6.0, MADA1 and MADA3 boards replace respectively MCV8 and MCV24 boards. They offer an echo depth of 128 ms instead of 32 ms (system option to be configured in MAO).

Note 2:

ARMADA daughterboard: due to a power supply limitation, only one ARMADA daughterboard is allowed in a rack.

Note 3:

GA-3 board: due to a power supply limitation:

- The GA-3 board cannot be hosted in a small rack
- Only one GA-3 board can be hosted in the large main rack
- Two GA-3 boards can be hosted in the large extension rack

1.2.1 CS Board

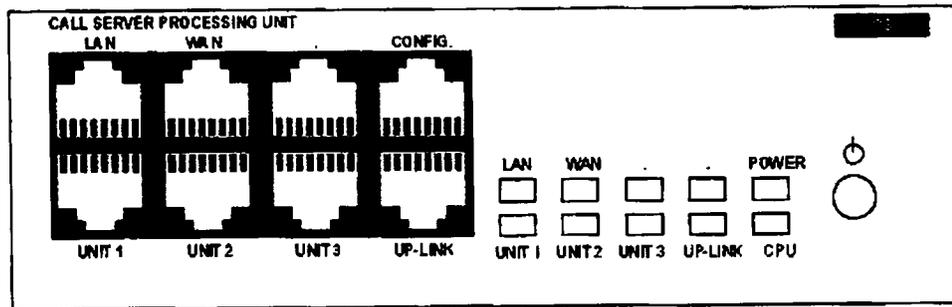

Figure 1.3: CS Board Front Panel

The CS board offers the following features:

- Call server
- 4645 Voice mail (optional)

U. 233/12

1.2.1.1 LED Meanings

Name	Function
CPU	Flashing green: CPU operating correctly
LAN	Green: LAN operating correctly (flashes to indicate traffic)
WAN	Green: WAN operating correctly (flashes to indicate traffic)
UNIT 1-3 UPLINK	Green: LAN switch 1 interface operating correctly (flashes to indicate traffic)

1.2.1.2 CS Board Micro Switches Setting

The CS board setting of micro switches depends on board position in the rack:

CS board position	Micro switches value	Micro switches setting
Controller position	0x09	

U. 233/12

U. 233/12

CS board position	Micro switches value	Micro switches setting
Other positions	0x01	

Caution:
 In controller position, if the CS board setting of micro switches does not correspond to the 0x09 value, the CS board cannot monitor the activity of an optional external batteries rack.

1.2.2 CS-2 Board

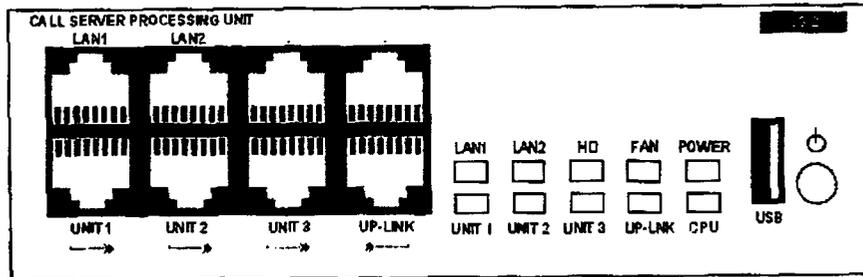

Figure 1.4: CS-2 Board Front Panel

The CS-2 board offers the following features:

- Call server
- 4645 Voice mail (optional)

In addition, this board can act as a PCS (Passive Call Server) without restriction.

1.2.2.1 External Interfaces

- **LAN1:** 10/100/1000 BaseT Ethernet access
- **LAN2:** redundant 10/100/1000 BaseT Ethernet access
- . (top right): V24 access to system configuration and remote reset signal coming from an RMA box
- **UNIT1, UNIT 2, UNIT 3, UP-LINK:** 4 ports 10/100BT LAN switch (if the SLANX4 daughterboard is present)
- **USB:** not used

1.2.2.2 LED Meanings

Handwritten signature

Handwritten signature

Handwritten signature

Name	Function
LAN1	- Green: LAN port 1 operating correctly - Flashing green: Ethernet traffic detected, flash speed increases with traffic
LAN2	- Green: LAN port 2 operating correctly (the dual Ethernet feature is configured) - Flashing green: Ethernet traffic detected, flash speed increases with traffic
HD	Green: hard disk activity
FAN	- Green: fans operating correctly - Red: 1 or 2 fan(s) out of service
Power	- Green: operating on mains - Yellow: operating on battery - Flashing red: shutdown in progress - Red: shutdown complete - Off: power off
UNIT 1-3 UPLINK	Green: LAN switch 1 interface operating correctly (flashes to indicate traffic)
CPU	Flashing green: CPU operating correctly

1.2.2.3 Daughterboards

The CS-2 board supports the SLANX4 daughterboards (optional). This daughterboard provides a 4 ports 10/100BT LAN switch. This switch cannot be configured.

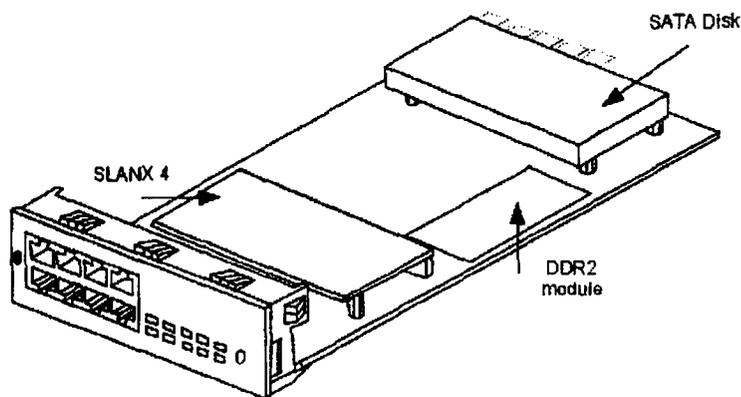

Figure 1.5: CS-2 Daughterboards Installation

1.2.2.4 Dual Ethernet

Two dual Ethernet modes are available:

- Ethernet Redundancy
- Ethernet Load Balancing

1.2.2.4.1 Ethernet Redundancy

The CS-2 board supports the Ethernet redundancy feature (also called hot standby or dual Ethernet).

Two Ethernet interfaces allow two Ethernet accesses. The two Ethernet interfaces have the same MAC address and IP address. One interface is active, the other one is standby. When the active interface fails, the standby interface switches to active automatically.

For complete redundancy, each interface must be connected to a different switch unit. These switches must be parts of a redundancy network supporting the Fast Spanning Tree standard. As in no redundancy mode, only one IP address is used.

Ethernet Redundancy must be activated via the netadmin tool (see: netadmin - Operation - Ethernet Redundancy).

Note:

The SLANX4 board does not support Ethernet redundancy.

1.2.2.4.2 Ethernet Load Balancing

The CS-2 board supports the Ethernet load balancing feature.

The two Ethernet interfaces are active simultaneously, the traffic is shared between the two interfaces. When an interface fails, the other one proceeds the whole traffic.

The two Ethernet interfaces must be connected to two interfaces of the same switch unit. This switch unit requires a special configuration. This switch unit must support the load balancing feature.

Ethernet load balancing must be activated via the netadmin tool (see: netadmin - Operation - Ethernet Redundancy).

Note:

The SLANX4 board does not support load balancing.

1.2.3 GD Board

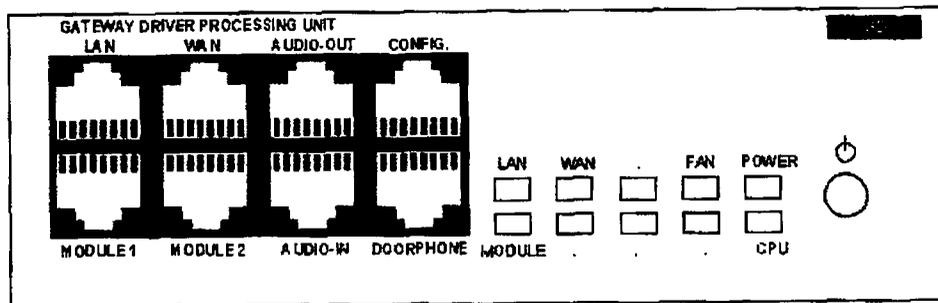

Figure 1.6: GD Board Front Panel

The GD board offers the following features:

- Media Gateway controller
- Switching
- Voice over IP

- Tone generator
- Voice guides
- Three party conference
- n party conference
- DTMF (touchtone) generator and detector
- Modem

This board is not compatible with the GA-3 and PowerMEX boards.

1.2.3.1 LED Meanings

Name	Function
POWER	- Green: operating on mains - Yellow: operating on battery
CPU	- Flashing green: CPU operating correctly - Red flashing: shutdown in progress
FAN	- Green: fans working - Red: one or two fans out of service
LAN	Flashing green: LAN operating correctly
MODULE	Green: HSL board installed

Y. R. B. A. T. W.

1.2.3.2 GD Board Micro Switches Setting

The GD board micro switches must be set as indicated in the figure below. Do not change the position of these switches (reserved for Alcatel-Lucent support).

Figure 1.7: Switch Settings

1.2.4 GD-3 Board

The GD-3 board drives the Media Gateway and interfaces the Media Gateway with the Call Server.

Y. R. B. A. T. W.

Y. R. B. A. T. W.

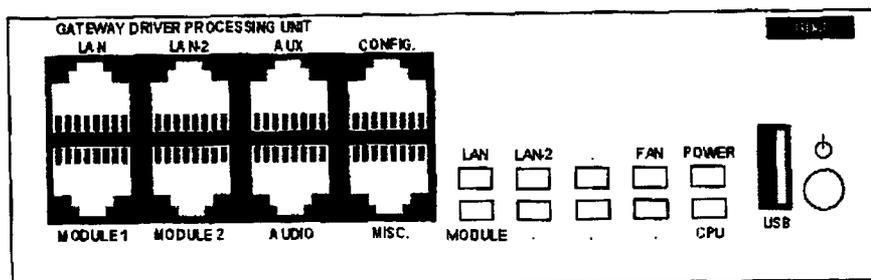

Figure 1.8: GD-3 Board Front Panel

This board is not compatible with the GA and MEX boards.

1.2.4.1 Functions

The GD-3 board offers the following features:

- Media Gateway controller
- Switching
- Voice over IP
- Tone generator
- Voice guides
- Conferencing
- DTMF (touchtone) generator and detector
- Modem
- Interface to the extension racks

1.2.4.2 Daughterboards

The GD-3 board supports the following daughterboards:

- HSL1, HSL2: These optional daughterboards allow to connect extension modules:
 - HSL1: allows to connect 1 extension module via Module1 connector
 - HSL2: allows to connect 2 extension modules via Module2 connectors
- ARMADA: this optional daughterboard supports additional DSPs (Digital Signal Processor) used for compression/decompression of voice channels for VoIP applications
- AFU: Auxiliary Function Unit: audio input/output (optional)

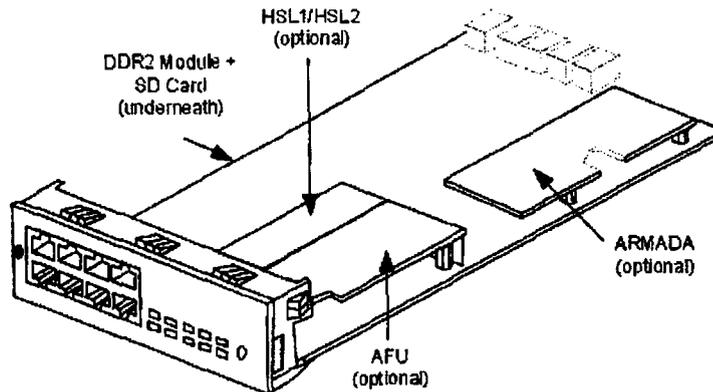

Figure 1.9: GD-3 Daughterboards Installation

1.2.4.3 LED Meanings

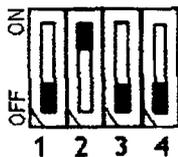

Figure 1.10: Switch Settings

1.2.5 GA Board

Auxiliary board enabling GD resources to be extended.

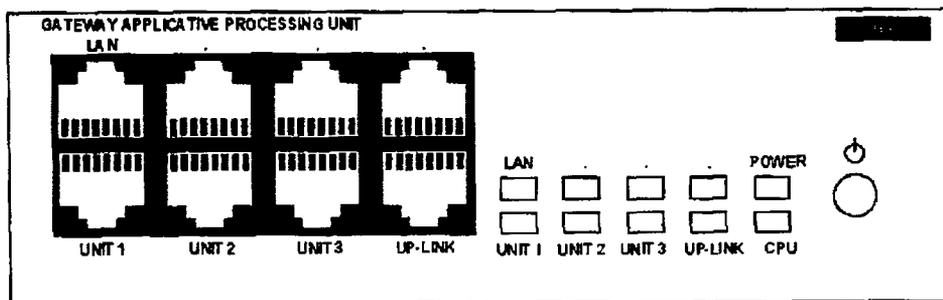

Figure 1.11: GA Board Front Panel

This board is not compatible with the GD-3, GA-3 and PowerMEX boards.

1.2.5.1 LED Meanings

Name	Function
CPU	Flashing green: CPU operating correctly
LAN	Green: LAN operating correctly (flashes to indicate traffic)
UNIT 1-3 UPLINK	Green: LAN switch 1 interface operating correctly (flashes to indicate traffic)

1.2.5.2 Micro Switches Setting

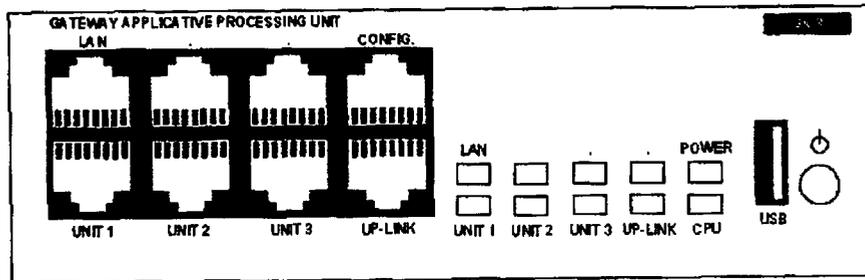

The GA board micro switches must be set as indicated in the figure below. Do not change the position of these switches (reserved for Alcatel-Lucent support).

Figure 1.12: Switch Settings

1.2.6 GA-3 Board

The GA-3 board is an applicative board which provides additional processing resources to the Media Gateway.

Y.A. 2009/10

Figure 1.13: GA-3 Board Front Panel

This board is not compatible with the GD, GA and MEX boards.

1.2.6.1 Functions

This board provides additional resources to the Media Gateway.

1.2.6.2 Daughterboards

The GA-3 board supports the following daughterboards:

- ARMADA: this optional daughterboard supports additional DSP (Digital Signal Processor) used for compression/decompression of voice channels for VoIP applications
- SLANX: this optional daughterboard provides a 4 ports 10/100BT LAN switch. This switch cannot be configured.

Y.A. 2009/10

Y.A. 2009/10

1.2.7 MEX Board

The MEX board drives the extension rack and interfaces the GD board located in the main rack.

Handwritten note: Ya. 233/10

Figure 1.16: MEX Board Front Panel

This board is not compatible with the GD-3 and GA-3 boards.

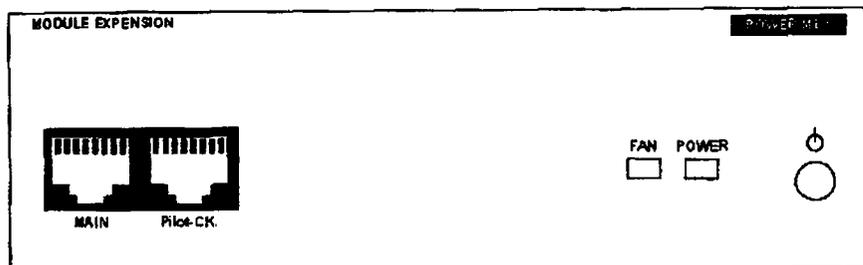

LED meanings :

Name	Function
POWER	<ul style="list-style-type: none"> - Green: operating on mains - Yellow: operating on battery - Flashing red: standby
FAN	<ul style="list-style-type: none"> - Green: fans operating correctly - Red: one or both fans failed

This board is not compatible with the GD-3 and GA-3board.

1.2.8 PowerMEX Board

The PowerMEX board drives the extension rack and interfaces the GD-3 board located in the main rack.

Handwritten note: Ya. 233/10

Handwritten note: Ya. 233/10

Figure 1.17: PowerMEX Board Front Panel

This board is not compatible with the GD, GA and MEX boards.

1.2.8.1 PowerMEX Daughterboards

The PowerMEX board supports the HSL1 daughterboard. This board allows the connection to the main rack.

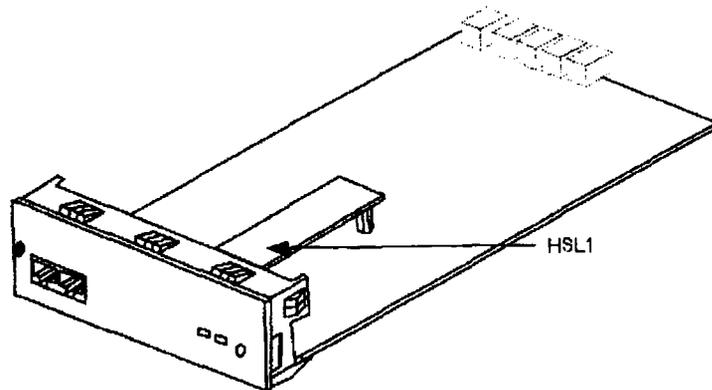

Figure 1.18: PowerMEX Daughterboard Installation

1.2.8.2 LEDs Meanings

Name	Meaning
POWER	- Green: operating on mains - Yellow: operating on battery - Flashing red: standby
FAN	- Green: fans operating correctly - Red: one or both fans failed

Note:

This board is not compatible with the GD board.

1.2.9 UAI-X and UAIX-1 Boards

These boards allow four, eight or 16 dedicated Alcatel-Lucent Reflexes sets or DECT or PWT base stations to be connected.

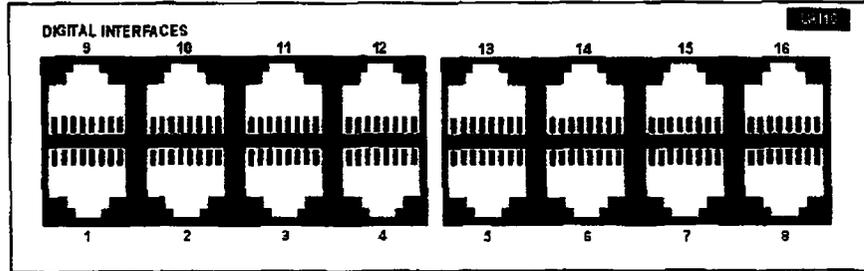

Figure 1.19: UAI-X Board Front Panel

1.2.10 SLI-X and SLIX-1 Boards

These boards allow four, eight or 16 analog sets to be connected.

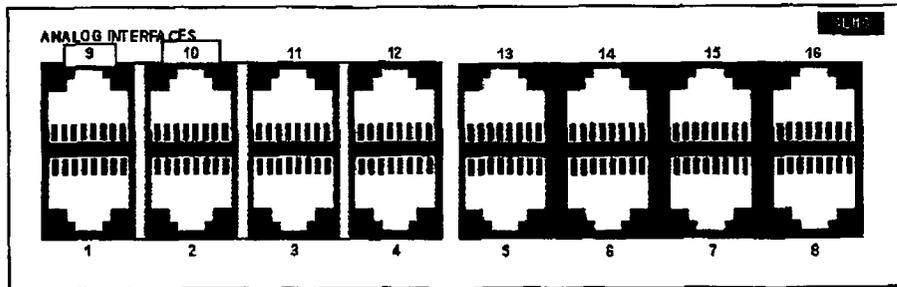

Figure 1.20: SLI-X Board Front Panel

1.2.11 BRA-X Boards

These boards allow two, four or eight T0 basic accesses (two B channels + one D channel) to be connected.

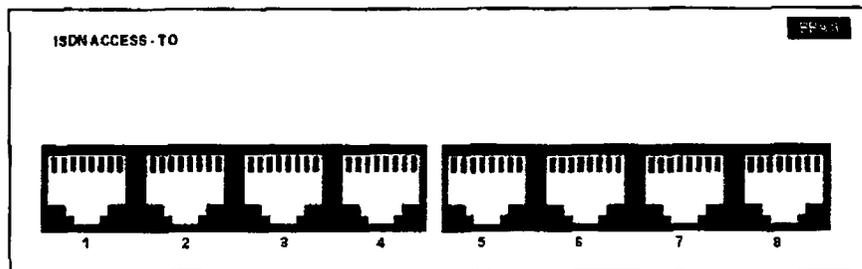

Figure 1.21: BRA-X Board Front Panel

Handwritten signature

Handwritten signature

Handwritten signature

1.2.12 PRA-T2, PRA-T1, T1 CAS, PRA DASS2 and PCM R2 Boards

These boards, which are used to connect a primary access, are the following:

- T2 access via the PRA-T2 board (30 B channels + one D channel)
- T1 access by boards:
 - PRA-T1 (CCS mode, 23 B channels + one D channel)
 - T1 CAS (CAS mode, 23 B channels + one D channel)
- DASS2 access: 30 B channels (64 Kbits/s) + two service channels
- PCM R2 access: 30 B channels (64 Kbits/s) + one signaling channel

Example on front panel:

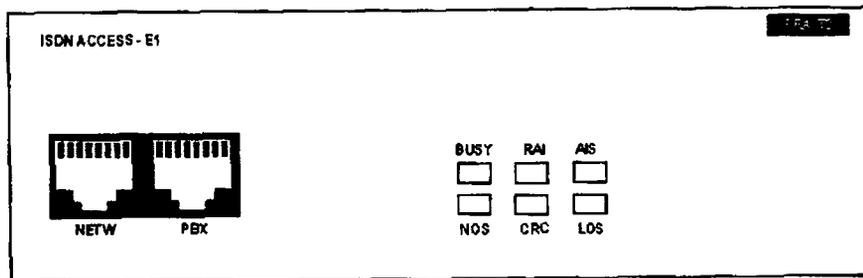

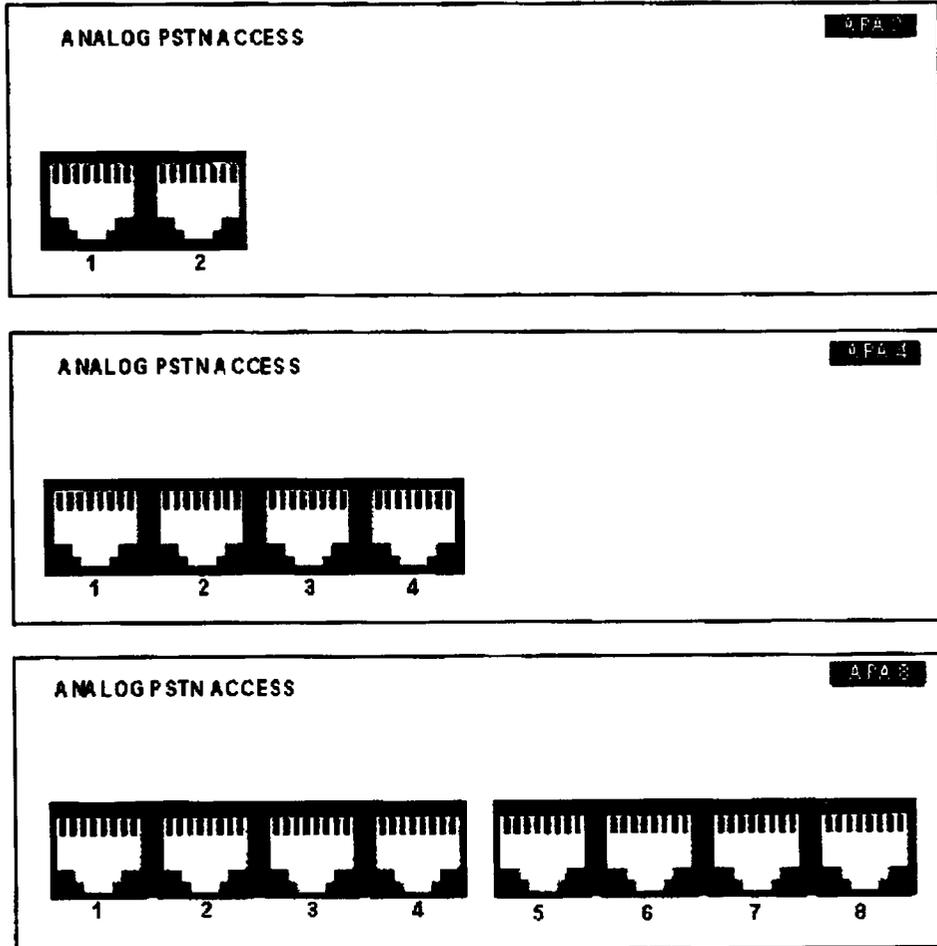

Figure 1.22: PRA-T2 Board Front Panel

LED meanings:

Name	Function
BUSY	B channels busy (red LED on if at least one B channel is busy)
RAI	Remote frame alarm (red LED on if there is an alarm)
AIS	Excessive number of "1"s in the 2 Mbits bit stream (red LED on if there is an alarm)
NOS	2 Mbits signal missing (red LED on if there is an alarm)
CRC	CRC error (red LED on if there is an alarm)
LOS	Loss of frame alignment (red LED on if there is an alarm)

1.2.13 APA-X Boards

These boards allow connection to the analog public network (two, four or eight accesses). These boards are also used to forward calls when a system failure occurs (power cutoff or computer problem).

Y.A. 2009/10

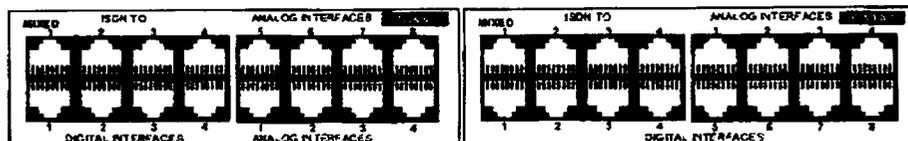

Figure 1.23: APA2 APA4 APA8 Boards Front Panel

Note:

In Australia and New Zealand, APA boards do not support decimal dialing.

1.2.14 MIX X/Y/Z Boards

These boards allow two or four T0 basic accesses, four or eight analog sets and four or eight dedicated Alcatel-Lucent Reflexes sets to be connected.

Y.A. 2009/10

Y.A. 2009/10

Figure 1.24: MIX Board Front Panel

1.2.15 LANX Boards

These boards allow a LAN to be created by connecting client PCs, IP-Phones, external Lanswitch and server.

1.2.15.1 LANX16 and LANX16-1 Boards

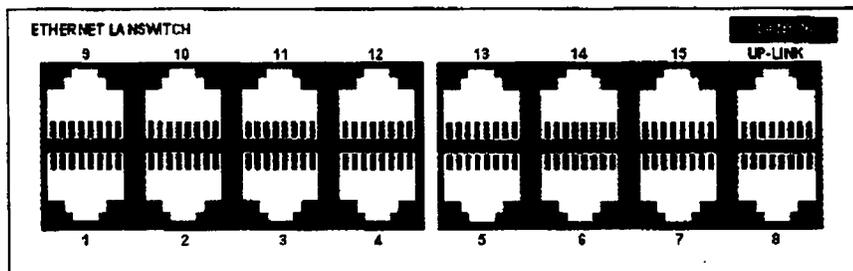

Figure 1.25: LANX19 Board Front Panel

Each RJ45 connector (category 5) has two green LEDs:

	off:	on:	flashing:
Left LED	link disconnected	link connected	link active
Right LED	half duplex	full duplex	collision

1.2.15.2 LANX-2 Boards

The LANX8-2 and LANX16-2 boards are second generation boards integrating respectively one or two Ethernet Gigabit ports for a Lanswitch/Layer 2 configuration. Any port can be used as an Uplink, as all the ports are auto MDI/MDIX.

The LANX8-2 board offers 7 10/100BaseT ports and one 10/100/1000BaseT port.

The LANX16-2 board offers 14 10/100BaseT ports and two 10/100/1000BaseT ports.

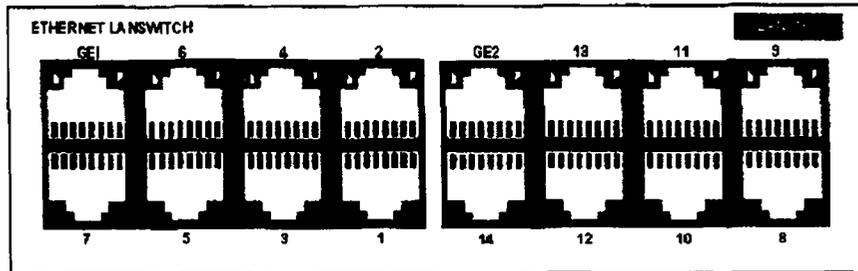

Figure 1.26: LANX12-2 Board Front Panel

LEDs for all ports are located on the top of the board.

- : indicates the status of ports GE1,6, 4,2, GE2, 13, 11, 9 on the top half of the board.
- : indicates the status of ports 7, 5, 3, 1, 14, 12, 10, 8 on the bottom half of the board.

Each RJ45 connector (category 5) has two LEDs:

	off:	on:	flashing:
Left LED (green)	link disconnected	link connected	link active
Right LED (yellow) for 10/100BaseT ports	10 MHz	100 MHz	
Right LED (yellow) for 10/100/1000BaseT ports	10 MHz or 100 MHz	1 GHz	

1.2.16 Installing Daughterboards/SDRAM on CPU Boards

The following table shows the different daughterboards that can be installed on the various CPU boards.

Daughter boards	CS	CS-2	GD	GD-3	GA	GA-3
SDRAM64	No	No	Yes	No	Yes	No

2 Specific Technical Data

2.1 Safety Standards

This cabinet is compliant with "Technical Regulations for Low Voltage Electrical Equipment" and "Technical Regulations in Electro Magnetic Compatibility" in force in Ukraine".

Handwritten signature: Ya. N. B. B. B.

2.1.1 Declaration of Conformity

We,
Alcatel-Lucent Enterprise,
32 avenue Kléber
92707 Colombes Cedex - France

Declare that the following products are deemed to comply with the requirements of Directive 1999/CE/5 of the European Parliament and the Council.

Any unauthorized modification of the products renders this declaration of conformity null and void.

Pursuant to the directive, as published in the Official Journal of the European Community of April 7 1999, these appliances can be used in all countries of the European Community, Switzerland, Norway and Iceland.

Alcatel-Lucent Enterprise - 32, avenue Kléber F-92707 Colombes Cedex RCS Paris 602 033 185.

2.1.2 Declaration of Conformity with Directives

This appliance is designed to be connected to the public telephone network through appropriate interfaces.

Handwritten signature: Ya. N. B. B. B.

Handwritten signature: Ya. N. B. B. B.

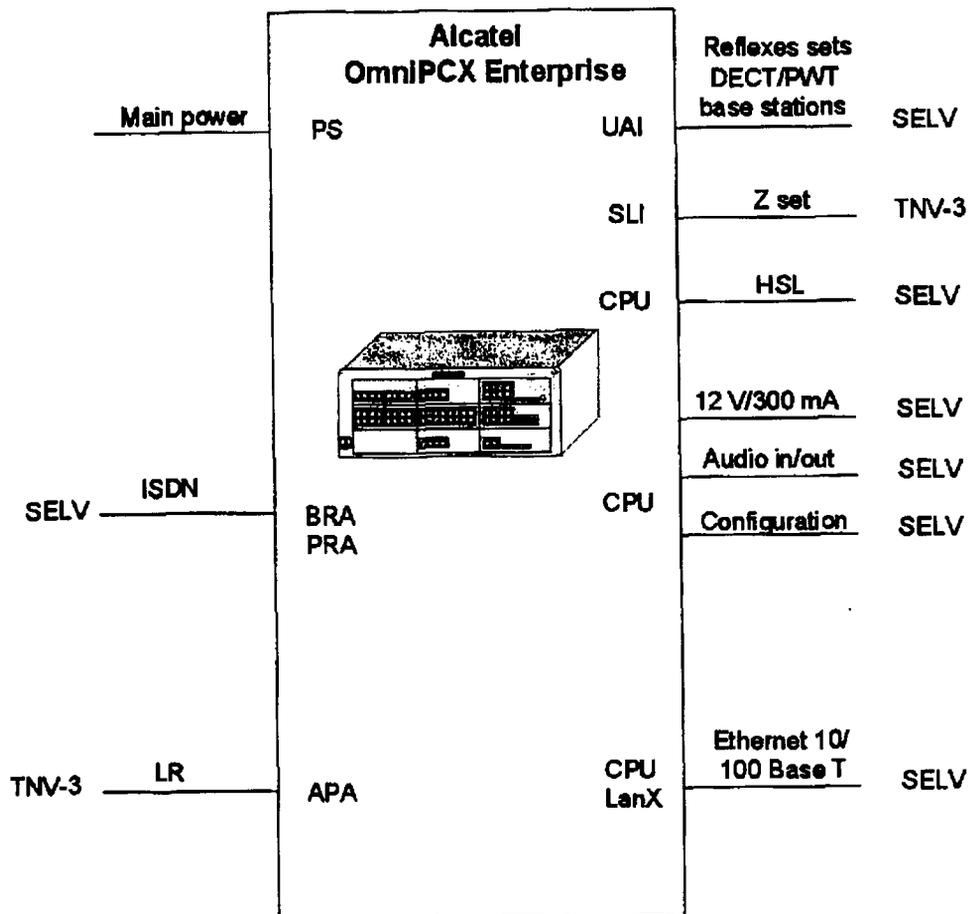

Chapter 2 Specific Technical Data

The CE mark indicates that this product conforms to the following Council Directives:

- 2004/108/EC (concerning electro-magnetic compatibility)
- 2006/95/EC (concerning electrical safety)
- 1999/5/EC (R&TTE)

2.1.3 Classification of Interfaces

SELV: Safety Extra Low Voltage
 TNV-3: Telecommunications Network Voltage

Handwritten signature: Y. N. B. B. B.

2.2 Environment

Storage, transportation and rack environment comply with the following standards:

- ETS 300 019 1.1, Storage, Class 1.2: Weather protected, Not temperature controlled locations

Handwritten signature: Y. N. B. B. B.

Handwritten signature: Y. N. B. B. B.

3

Installation Recommendations

3.1 Environmental Conditions

仅适用于海拔 2000m以下地区安全使用

3.1.1 Operation

- **Temperature:** to achieve optimum reliability, the ambient temperature must be between +5°C (-5°C exceptionally) and +40°C (45°C exceptionally) with a maximum variation of 30°C (86°F) per hour. In degree Fahrenheit, the ambient temperature must be between 41°F (23°F exceptionally) and 104°F (113°F exceptionally)
- **Relative humidity:** relative humidity must be between 5% and 85% (90% exceptionally) without condensation.

3.1.2 Storage

- **Temperature:** temperature must be between -25°C (-13°F) and +55°C (131°F).
- **Relative humidity:** relative humidity must be between 10% and 100% (without condensation).

3.1.3 Transportation

- **Temperature:** temperature must be between -40°C (-40°F) and +70°C (158°F).
- **Relative humidity:** relative humidity does not exceed 95% (without condensation).

3.1.4 Vibration

The hard disk drive is the most sensitive to these two phenomena. The vibrations must not exceed 0.01G with displacement amplitude less than 0.3mm. The shocks must be less than 4G during 22ms.

3.2 Site

- Select a dry, clean, well-ventilated location.
- Maintain ambient air flow to ensure normal ventilation. If airflow is restricted, blocked or the incoming air too warm, there is a risk of overheating.
- When the equipment is installed in a closed 19" cabinet, make sure the cabinet

equipped with a ventilation system capable of dissipating the heat generated by the equipment installed. Leave a clear space of at least 3 cm (1.2") around the side ventilation slots (left and right panels), and at least 10 cm (4") around the rear ventilation slots. Make sure the airflow is not blocked at the sides of the cabinet.

- When the system is mounted directly on a wall with the wall-mounting kit (Rack 1 only), leave a free space of at least 15 cm (6") around the entire system. Make sure that no objects are placed on top of the system or prevent evacuation of hot air. For a multi-rack installation, a horizontal rack alignment is preferred. If stacked vertically, leave a space of at least 10 cm (4") between racks.
- Make sure the connecting cables of the Alcatel-Lucent OmniPCX Enterprise Communication Server rack or other equipment or the uprights of the housing (19" cabinet for example) do not obstruct airflow through the rack.
- Install a 230V or 110V mains power outlet (depending on country) - 50 Hz or 60 Hz (2P+G) at a distance of no more than one meter from the rack if it is not installed in a cabinet (otherwise the cabinet cutoff switch is used).
- The room must be well lit.

3.3 Suggested Equipment

The following specifications are strongly recommended given that the PBX and its peripherals are both costly and safety equipment.

It is advised to have locked premises, with the key given to a single person.

3.3.1 Fire Detection

It is advisable to have fire detection equipment installed in the room (ionic smoke detection).

3.3.2 Protection Against Fire

It is advised to have inert gas injection protection installed in the room (water and foam projection mechanical systems are to be banned).

3.3.3 Temperature Alarm

A device that can warn of an abnormal temperature rise inside the room will make it possible to promptly remedy an air conditioning failure or any other failure.

3.4 General Recommendations

Caution:

It is vitally important to connect this product to a permanent ground connection installed in accordance with the rules of the art.

Owing to the presence of hazardous voltages, the metal back plate may only be removed by suitably qualified personnel.

In the event of a poor earth connection, it is IMPERATIVE to disconnect the telecommunication ports before reconnecting the earth. A check must then be made to ensure that all connectic

4 Protection against Interferences

Notice to the attention of the users and installer:

USA - FCC (Federal Communication Commission)

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to consult the installer or service person.

Changes or modifications to this equipment, not expressly approved by ALCATEL-LUCENT, may cause harmful interference and void the user's authority to operate this equipment.

Japan - VCCI (Voluntary Control Council for Interference)

この装置は、情報処理装置等電波障害自主規制協議会 (VCCI) の基準に基づくクラスB情報技術装置です。この装置は、家庭環境で使用することを目的としていますが、この装置がラジオやテレビジョン受信機に近接して使用されると、受信障害を引き起こすことがあります。
取扱説明書に従って正しい取り扱いをして下さい。

Translation :

This is a Class B product based on the standard of the Voluntary Control Council for Interference from Information Technology Equipment (VCCI). If this is used near a radio or television receiver in a domestic environment, it may cause radio interference. Install and use the equipment according to the instruction manual.

Добре дошли в центъра за техническа поддръжка на АЛКОМ-ТЕХ ЕАД!

С цел подобряване обслужването на клиенти и повишаване качеството на техническата поддръжка, АЛКОМ-ТЕХ ЕАД използва система за регистриране и проследяване на инциденти. Вашата заявка ще получи уникален идентификационен номер, чрез който може да се проследи извършената работа по всеки конкретен случай. Системата пази пълен архив на подадените заявки. При отваряне на инцидент, използването на валиден e-mail адрес е задължително!

Отваряне на нов инцидент

Моля потърсете максимално подробно прилежащия формуляр. За обновяване на информация по вече създаден инцидент, влезте в системата чрез формата вдясно.

За отваряне на нов инцидент, моля попълнете формуляра.

Име и фамилия:

e-mail:

Телефон:

Относно:

Описание на проблема:

Приоритет:

Контролен текст: Въведете текста от картинката.

Copyright © osTicket.com. All rights reserved

У.Н. РИЗОВ

Задължителните полета във формуляра са маркирани с удебелен шрифт, а именно:

- **Име и фамилия**
- **e-mail адрес**
- **Относно** – кратко описание, например „НОИ Хасково, проблем с външни линии”
- **Описание на проблема** – възможно най пълно описание на повредата
- **Контролен текст** – въвежда се с цел защита от автоматизирано генериране на заявки

Незадължителните полета са:

- **Телефон** – въвеждането е желателно с цел свързване при необходимост от доуточняващи въпроси
- **Приоритет** – дава възможност на клиента да маркира приоритет според тежестта на повредата

След попълване на формуляра се натиска бутон „Изпращане”. При коректно попълнени данни се появява екран за успешно създаден инцидент. В противен случай се изписва съобщение за грешка с изписани в червено коментари за неправилно попълнените полета.

SUPPORT TICKET SYSTEM

[Начало](#) [Нов инцидент](#) [Статус](#)

Инцидентът е създаден успешно!

Павел Личев.

Благодарим Ви, че се свързахте с нас.

Заявката за поддръжка е генерирана успешно. При необходимост, наш представител ще се свърже с Вас в най-скоро време.

E-mail с номер на инцидента е изпратен автоматично на адрес lichev@alcomtech.bg. Ще се нуждаете от този номер и Вашия e-mail адрес, за да проследите статуса на инцидента и извършената по него работа.

Ако желаете да добавите допълнителна информация по същия проблем, влезте в системата използвайки данните от получения e-mail. Моля не отваряйте няколко инцидента по един и същи проблем.

Екипът на Алком-Тех

Copyright © osTicket.com. All rights reserved

osTicket

Използването на активен e-mail адрес е абсолютно задължително. Системата изпраща автоматично съобщение с контролен номер на създадения инцидент и линк, на който може да се проследи извършената работа по проблема. При необходимост, съзателят на заявката (инцидента) може да въведе допълнителна информация или коментар по проблема. Системата отново ще изпрати потвърждаващ e-mail за успешно добавена информация.

У. М. М. М.

За добавяне на информация към текущ инцидент, или проследяване на неговия статус, влизането в системата става чрез изпратения по електронна поща линк, или чрез въвеждане на e-mail адрес и номер на инцидента в долни десен край на началния екран.

При влизане в системата, клиентът може да направи справка за всички негови отворени и затворени инциденти. Заявките са обвързани с e-mail адреса на изпращача, поради което е желателно заявките на определена организация да се правят винаги от един и същ e-mail адрес. Така лесно може да се направи справка за всички създадени до момента отворени и затворени инциденти.

Начини и методи за приемане на заявка за възникнал проблем:

1. Онлайн на адрес: [h](#)
2. По електронна поща на адрес [h](#)
3. По телефон на номер 0 [h](#) на цената на един градски разговор
4. По факс на номер [h](#)

У. М. М. М.

В случай, че заявката не е направена по метода от точка 1, служител на Алком-Тех ЕАД ще отвори инцидент от името на клиента, при което подателя на заявката ще получи по електронна поща контролен номер, с цел проследяване на развитието по съответния проблем.
